Published by Asoke K. Ghosh, PHI Learning Private Limited, M-97, Connaught Circus, New Delhi-110001 and Printed by Syndicate Binders, A-20, Hosiery Complex, Noida, Phase-II Extension, Noida-201305 (N.C.R. Delhi).

CONTENTS

<i>Preface</i>	<i>xix</i>
<i>Acknowledgements</i>	<i>xxi</i>
1. RELATIVISTIC MECHANICS	1–47
1-1 What is Special Theory of Relativity?	1
1-2 Frame of Reference	2
1-3 Ether Hypothesis	3
1-4 The Michelson–Morley Experiment	3
1-5 Theoretical Basis of Special Theory of Relativity (Einstein’s Postulates of Special Theory of Relativity)	6
1-6 The Galilean Transformations	7
1-7 The Lorentz Transformations	8
1-8 Invariance of Space–Time Element $x^2 + y^2 + z^2 - c^2t^2$ under Lorentz Transformations	10
1-9 Relativistic Velocity Addition Theorem	11
1-10 Length Contraction	13
1-11 Time Dilation	15
1-12 Expression for the Relativistic Mass	17
1-13 Expression for the Relativistic Force	19
1-14 Expression for the Relativistic Kinetic Energy	20
1-15 Einstein’s Mass–Energy Relation	21
1-16 Relation between Relativistic Momentum and Relativistic Energy	23
1-17 Invariance of the Relation $E^2 - p^2c^2 = m_0^2c^4$	23
1-18 Expression for the Relativistic Momentum in Terms of Relativistic Kinetic Energy	24
<i>Solved Examples</i>	25
<i>Model Questions</i>	36
<i>Problems</i>	38
<i>Objective Type Questions</i>	43

2. QUANTUM MECHANICS	48–95
2-1 Quantum Theory of Radiation	48
2-2 Wave–Particle Duality	49
2-3 de Broglie Concept of Matter Waves	50
2-4 Matter Waves or de Broglie Waves	51
2-5 Explanation of Bohr’s Quantization Rule Using de Broglie Hypothesis	52
2-6 Phase Velocity and Group Velocity	53
2-7 Davisson and Germer Experiment	56
2-8 Heisenberg’s Uncertainty Principle	58
2-9 Derivation of Uncertainty Principle	60
2-10 Applications of Uncertainty Principle	65
2-11 Schrödinger’s Wave Equations	71
2-12 Born’s Interpretation of Wavefunction ψ	75
2-13 Application of Time-independent Schrödinger’s Wave Equation	76
<i>Solved Examples</i>	79
<i>Model Questions</i>	84
<i>Problems</i>	85
<i>Objective Type Questions</i>	95
3. STATISTICAL MECHANICS	96–147
3-1 Introduction	96
3-2 Macroscopic and Microscopic Systems	96
3-3 Phase Space	97
3-4 Fundamental Postulates of Statistical Mechanics	99
3-5 Classical and Quantum Approach to Statistical Mechanics	99
3-6 Stirling Formula	100
3-7 Some Important Definitions	101
3-8 Maxwell–Boltzmann Statistics	103
3-9 Maxwell–Boltzmann Law of Distribution of Speeds	106
3-10 Average Speed, Root Mean Square Speed and Most Probable Speed	111
3-11 Partition Function	114
3-12 Bose–Einstein Statistics	118
3-13 Derivation of Planck’s Radiation Law of Blackbody Using Bose–Einstein Statistics	120
3-14 Fermi–Dirac Statistics	123
3-15 Energy Distribution of Free Electron in Metals	126
<i>Solved Examples</i>	132
<i>Model Questions</i>	141
<i>Problems</i>	142
<i>Objective Type Questions</i>	144
4. GEOMETRICAL OPTICS	148–212
4-1 Fermat’s Principle	148
4-2 Lens	150

4-3	Cardinal Points of a Co-axial Lens System	151
4-4	Coincidence of Principal Points and Nodal Points	153
4-5	Lens Formula for Thin Lenses	154
4-6	Newton's Formula for a Co-axial Lens System	156
4-7	Magnifications of a Co-axial Lens System	157
4-8	Deviation Produced by a Thin Lens	161
4-9	Equivalent Lens and Equivalent Focal Length	162
4-10	Aberrations of a Lens	167
4-11	Expression for Longitudinal Chromatic Aberration	169
4-12	Achromatism of Thin Lens	171
4-13	Monochromatic Aberrations	174
4-14	Aplanatic Surface	183
4-15	Eyepiece	185
4-16	Comparative Analysis of Ramsden Eyepiece and Huygens Eyepiece	189
	<i>Solved Examples</i>	189
	<i>Model Questions</i>	205
	<i>Problems</i>	207
	<i>Objective Type Questions</i>	209

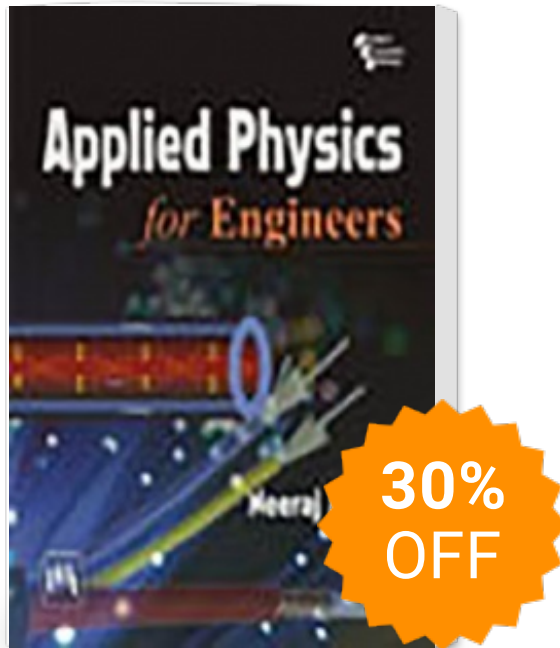

5. PHYSICAL OPTICS 213–346

5-1	Interference of Light	213
5-2	Expression for the Intensities of Resultant Light Wave in Constructive Interference and Destructive Interference	214
5-3	Conditions for Interference	216
5-4	Methods of Producing Interference Pattern of Light	217
5-5	Coherent Sources	217
5-6	Methods for the Production of Coherent Sources	218
5-7	Fresnel's Biprism	219
5-8	Expression for the Fringe-width in Young's Double-slit Experiment (or Fresnel's Biprism Experiment)	222
5-9	Illumination of a Slit with White Light in Fresnel's Biprism Experiment	224
5-10	Effect of Increasing the Width of the Slit in Biprism Experiment	226
5-11	Determination of the Thickness of a Thin Transparent Sheet Using the Biprism Experiment	227
5-12	Interference in a Thin Film by Reflected Light	228
5-13	Interference in a Thin Film by Transmitted Light	230
5-14	Difference between the Interference Patterns Produced by Reflection and Refraction in a Thin Film	232
5-15	Absence of Colours in White Light Reflected from a Thick Film	232
5-16	Blackness of an Excessive Thin Film in Reflected Light	233
5-17	Interference in a Wedge-shaped Thin Film by Reflected Light	233
5-18	Observation of Colours in Thin Films	236
5-19	Newton's Rings	238
5-20	Applications of Newton's Rings Experiment	240
5-21	Diffraction of Light	242

5-22	Types of Diffraction	243
5-23	Fresnel Diffraction by a Straight Edge	244
5-24	Fresnel Diffraction by a Narrow Wire	245
5-25	Fraunhofer Diffraction by a Single Slit	245
5-26	Fraunhofer Diffraction by a Double Slit	251
5-27	Fraunhofer Diffraction by N Parallel Slits: Diffraction Grating	255
5-28	Plane Transmission Grating	259
5-29	Dispersive Power of a Plane Transmission Grating	261
5-30	Angular Width of Principal Maximum in a Plane Transmission Grating	262
5-31	Resolving Power and Limit of Resolution of an Optical Instrument	263
5-32	Resolving Power of a Grating	265
5-33	Resolving Power of a Telescope	266
5-34	Resolving Power of a Microscope	267
5-35	Polarization of Light: Light is a Transverse Wave	269
5-36	Some Important Definitions	271
5-37	Types of Polarization	272
5-38	Law of Malus	275
5-39	Polarization by Reflection: Brewster's Law	276
5-40	Isotropic and Anisotropic Crystals	278
5-41	Birefringent Materials	278
5-42	E-Ray and O-Ray	279
5-43	Negative and Positive Crystals	279
5-44	Dichroism	280
5-45	Calcite Crystal	280
5-46	Nicol Prism	281
5-47	Huygen's Explanation of Double Refraction	283
5-48	Quarter-wave Plate or $\lambda/4$ Plate	284
5-49	Half-wave Plate or $\lambda/2$ Plate	285
5-50	Production of Plane Polarized, Circularly Polarized and Elliptically Polarized Light	286
5-51	Detection of Plane Polarized, Circularly Polarized and Elliptically Polarized Light	286
5-52	Plane Polarized Light and Circularly Polarized Light are the Special Cases of Elliptically Polarized Light	289
5-53	Optical Rotation or Rotatory Polarization	290
5-54	Laws of Optical Rotation	291
5-55	Fresnel's Theory of Optical Rotation	292
5-56	Specific Rotation	294
5-57	Laurent's Half-shade Polarimeter	294
5-58	Bi-quartz Polarimeter	296
	<i>Solved Examples</i>	297
	<i>Model Questions</i>	316
	<i>Problems</i>	319
	<i>Objective Type Questions</i>	330

6. X-RAYS	347–382
6-1 X-rays	347
6-2 Control of Intensity and Quality	349
6-3 Hard X-rays and Soft X-rays	349
6-4 Properties of X-rays	350
6-5 Types of X-rays	351
6-6 Continuous X-rays Spectrum	352
6-7 Characteristic X-rays Spectrum	353
6-8 Moseley's Law	354
6-9 Failure of Diffraction of X-rays from Transparent Gratings	357
6-10 Diffraction of X-rays: Bragg's Law	358
6-11 Bragg's Spectrometer	359
6-12 Compton Effect	361
6-13 Experimental Verification of Compton Effect	364
6-14 Relation between Angle of Scattering ϕ and Angle of Recoil θ	365
6-15 Energy of Scattered X-ray Photon	366
6-16 Kinetic Energy of Recoil Electron	367
6-17 Compton Effect for Tightly Bound Atomic Electron	368
6-18 Compton Effect cannot be Observed for Visible Light	368
<i>Solved Examples</i>	369
<i>Model Questions</i>	373
<i>Problems</i>	374
<i>Objective Type Questions</i>	378
7. LASERS AND HOLOGRAPHY	383–417
7-1 Laser: An Introduction	383
7-2 Comparison of Ordinary Beam of Light and Laser Beam	384
7-3 Difference between Spontaneous Emission and Stimulated Emission	384
7-4 Interaction of Radiation with Matter	384
7-5 Relation between Einstein's Coefficients A and B	387
7-6 Some Important Definitions	388
7-7 Population Inversion is not Possible in Two-level Pumping Scheme	393
7-8 Ruby Laser	393
7-9 Helium–Neon (He–Ne) Laser	395
7-10 Difference between Ruby Laser and He–Ne Laser	397
7-11 Nd:YAG (Neodymium-doped Yttrium Aluminium Garnet; Nd:Y ₃ Al ₅ O ₁₂) Laser	397
7-12 Carbon Dioxide Laser (CO ₂ Laser)	399
7-13 Semiconductor Laser	401
7-14 Expression for the Powering of a Laser Beam	402
7-15 Characteristics of Laser	403
7-16 Applications of Laser	404
7-17 Holography	405
