

**DEEP LEARNING Lab  
(KCS078)**

**LAB MANUAL**

**SESSION 2024-25**

**COURSE: B. TECH (CSIT)  
SEM : VII<sup>th</sup>**

**Department of Computer Science and  
Information Technology**

**DRONACHARYA GROUP OF INSTITUTIONS  
Knowledge Park III, Gr. Noida**

## **Table of Contents**

1. Vision and Mission of the Institute.
2. Vision and Mission of the Department.
3. Program Outcomes (POs).
4. Program Educational Objectives (PEOs/PSOs).
5. University Syllabus.
6. Course Outcomes (COs).
7. Course Overview.
8. List of Experiments mapped with COs.
9. DO's and DON'Ts.
10. General Safety Precautions.
11. Guidelines for students for report preparation.
12. Lab Experiments.

# **DRONACHARYA GROUP OF INSTITUTIONS GREATER NOIDA**

## **VISION**

- Instilling core human values and facilitating competence to address global challenges by providing Quality Technical Education.

## **MISSION**

- M1 - Enhancing technical expertise through innovative research and education, fostering creativity and excellence in problem-solving.
- M2 - Cultivating a culture of ethical innovation and user-focused design, ensuring technological progress enhances the well-being of society.
- M3 - Equipping individuals with the technical skills and ethical values to lead and innovate responsibly in an ever-evolving digital landscape.

# **DEPARTMENT OF COMPUTER SCIENCE AND INFORMATION TECHNOLOGY**

## **VISION**

- Promoting technologists by imparting profound knowledge in information technology, all while instilling ethics through specialized technical education.

## **MISSION**

- Delivering comprehensive knowledge in information technology, preparing technologists to excel in a rapidly evolving digital landscape.
- Building a culture of honesty and responsibility in tech, promoting smart and ethical leadership.
- Empowering individuals with specialized technical skills and ethical values to drive positive change and innovation in the tech industry.

## Program Outcomes (POs)

Engineering Graduates will be able to:

Program Outcomes	Statement
PO1	<b>Engineering knowledge:</b> Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex computer engineering problems.
PO2	<b>Problem analysis:</b> Identify, formulate, review research literature, and analyse complex computer engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	<b>Design/development of solutions:</b> Design solutions for complex computer engineering problems and design system components or processes that meet the specific needs with appropriate considerations for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	<b>Conduct investigations of complex problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide conclusions
PO5	<b>Modern tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations
PO6	<b>The engineer and society:</b> Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent relevant to the professional engineering practices
PO7	<b>Environment and sustainability:</b> Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
PO8	<b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norm of the engineering practices
PO9	<b>Individual and team work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings
PO10	<b>Communications:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
PO11	<b>Project management and finance:</b> Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	<b>Life-long learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and life learning in the broadest context of technological change.

## **Program Specific Outcomes (PSOs)**

- **PSO1:** To adapt to emerging technologies and develop innovative solutions for existing and newer problems.
- **PSO2:** To create and apply appropriate techniques IT tools to complex engineering activities with an understanding of the limitations.
- **PSO3:** To manage complex IT projects with consideration of the human, financial, ethical and environmental factors.

## Deep Learning Lab Manual

<b>S. No.</b>	<b>Name of the Program</b>	<b>Page No.</b>
1	Design a single unit perceptron for classification of a linearly separable binary dataset without using pre-defined models. Use the Perceptron() fromsklearn.	
2	Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets. Vary the activation functions used and compare the results.	
3	Build a Deep Feed Forward ANN by implementing the Backpropagation algorithm and test the same using appropriate data sets.	
4	Design and implement an Image classification model to classify a dataset of images using Deep Feed Forward NN Use the MNIST, CIFAR-10 datasets.	
5	Design and implement a CNN model (with 2 layers of convolutions) to classify multi category image datasets.	
6	Design and implement a CNN model (with 4+ layers of convolutions) to classify multi category image datasets. Use the MNIST, Fashion MNIST, CIFAR-10 datasets. Set the No. of Epoch as 5, 10 and 20. Make the necessary changes whenever required.	
7	Design and implement a CNN model (with 2+ layers of convolutions) to classify multi category image datasets. Use the concept of padding and Batch Normalization while designing the CNN model.	
8	Use the concept of Data Augmentation to increase the data size from a singleimage.	
9	Implement the standard VGG 16 CNN architecture model to classify cat and dog image dataset .	
10	Implement RNN for sentiment analysis on movie reviews	

<b>Cos</b>	<b>COURSE OUTCOMES</b>
<b>KCS078.1</b>	Understand the basic concepts and techniques of Deep Learning and the need of Deep Learning techniques in real-world problems.
<b>KCS078.2</b>	Understand CNN algorithms and the way to evaluate performance of the CNN architectures.
<b>KCS078.3</b>	Understand and implement algorithm to solve problems by Greedy algorithm approach
<b>KCS078.4</b>	Apply RNN and LSTM to learn, predict and classify the real-world problems in the paradigms of Deep Learning
<b>KCS078.5</b>	Understand, learn and design GANs for the selected problems.

1. Design a single unit perceptron for classification of a linearly separable binary dataset without using pre-defined models. Use the Perceptron() from sklearn.

```
import numpy as np
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
from sklearn.linear_model import Perceptron
df=pd.read_csv('/content/gdrive/My Drive/ML_lab/placement.csv') X = df.iloc[:,0:2]
y = df.iloc[:,-1] p = Perceptron() p.fit(X,y) print(p.coef_) print(p.intercept_)
z=p.score(X,y)
print("accuracy score is",z)
from mlxtend.plotting import plot_decision_regions plot_decision_regions(X.values,
y.values, clf=p, legend=2)
```

2. **Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets. Vary the activation functions used and compare the results.**

Program:

```
from keras.models import Sequential
from keras.layers import Dense, Activation import numpy as np
import pandas as pd
from sklearn import datasets iris = datasets.load_iris()
X, y = datasets.load_iris( return_X_y = True)
from sklearn.model_selection import train_test_split
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.40) # Define the
network model and its arguments.
# Set the number of neurons/nodes for each layer:
model = Sequential() model.add(Dense(2, input_shape=(4,)))
model.add(Activation('sigmoid')) model.add(Dense(1))
model.add(Activation('sigmoid'))
#sgd = SGD(lr=0.0001, decay=1e-6, momentum=0.9, nesterov=True)
#model.compile(loss='categorical_crossentropy', optimizer=sgd, metrics=['accuracy'])
# Compile the model and calculate its accuracy:
model.compile(loss='mean_squared_error', optimizer='sgd', metrics=['accuracy'])
#model.fit(X_train, y_train, batch_size=32, epochs=3)
# Print a summary of the Keras model: model.summary()
#model.fit(X_train, y_train)
#model.fit(X_train, y_train, batch_size=32, epochs=300) model.fit(X_train, y_train,
epochs=5)
score = model.evaluate(X_test, y_test) print(score)
```

3. **Design and implement an Image classification model to classify a dataset of images using Deep Feed ForwardNN. Record the accuracy corresponding to the number of epochs. Use the MNIST datasets**

```
#load required packages import tensorflow as tf
from tensorflow import keras
from keras.models import Sequential from keras import Input
